

# Review Calc I (Limits Derivatives Integrals)

## Limit intuitively

Calculating limits.

## Limit Laws

$$1 \quad \lim_{x \rightarrow c} [f(x) \pm g(x)] = \lim_{x \rightarrow c} f(x) \pm \lim_{x \rightarrow c} g(x)$$

$$2 \quad \lim_{x \rightarrow c} f(x)g(x) = (\lim_{x \rightarrow c} f(x)) \lim_{x \rightarrow c} g(x)$$

$$3 \quad \lim_{x \rightarrow c} \frac{f(x)}{g(x)} = \frac{\lim_{x \rightarrow c} f(x)}{\lim_{x \rightarrow c} g(x)} \quad \text{when } \lim_{x \rightarrow c} g(x) \neq 0$$

Example  $\lim_{x \rightarrow 0} \frac{(x+3)^2 - 9}{x}$  cannot apply 3 directly why?

Soln 1. direct computation

$$\begin{aligned} \lim_{x \rightarrow 0} \frac{x^2 + 6x + 9 - 9}{x} &= \lim_{x \rightarrow 0} \frac{x^2 + 6x}{x} = \lim_{x \rightarrow 0} x + 6 \\ &= \lim_{x \rightarrow 0} x + \lim_{x \rightarrow 0} 6 = 6 \end{aligned}$$

Soln 2. L'Hopital's rule

$$\frac{0}{0} \quad \frac{\infty}{\infty} \quad \lim_{x \rightarrow c} \frac{f(x)}{g(x)} = \lim_{x \rightarrow c} \frac{f'(x)}{g'(x)}$$

$$\lim_{x \rightarrow c} f(x) = \lim_{x \rightarrow c} g(x) = 0$$

$$\begin{aligned} &= \lim_{x \rightarrow 0} \frac{2(x+3)}{1} \\ &= \lim_{x \rightarrow 0} 2x + 6 = 6 \end{aligned}$$

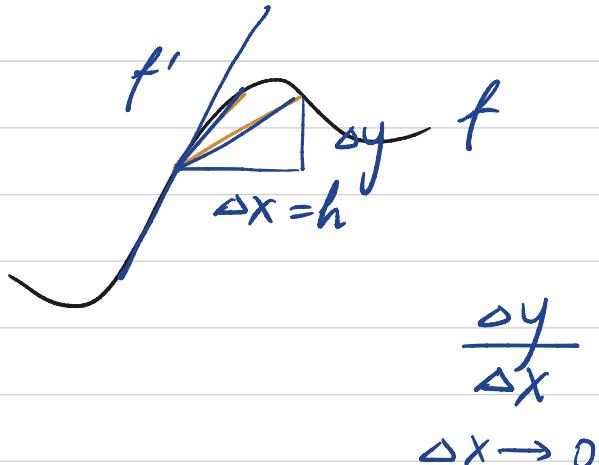

## Derivatives

$$f'(x) \quad \frac{d}{dx} f(x)$$

def.

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

$$\begin{matrix} \Delta y \\ \Delta x \end{matrix}$$

$$\frac{\Delta y}{\Delta x}$$

$$\Delta x \rightarrow 0$$

## Derivative Laws

$$(f \pm g)' = f' \pm g'$$

$$(fg)' = f'g + fg'$$

$$\left(\frac{f}{g}\right)' = \frac{f'g - fg'}{g^2}$$

## Chain rule

$$(f \circ g)'$$

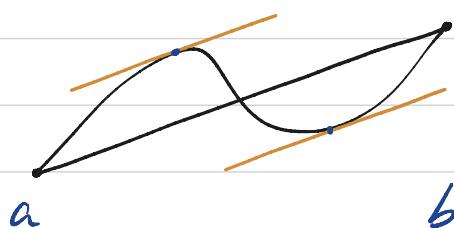

$$\frac{d}{dx} f(g(x)) = \frac{d}{dx} f(g(x)) \cdot \frac{d}{dx} g(x)$$

## Derivatives of the following functions

$f$	$x^n$	$e^x$	$\sin x$	$\cos x$	$\ln x$
$f'$	$nx^{n-1}$	$e^x$	$\cos x$	$-\sin x$	$\frac{1}{x}$

$$\tan x' = \left( \frac{\sin x}{\cos x} \right)' = \frac{\cos x \cdot \cos x - (-\sin x \cdot \sin x)}{\cos^2 x} = \frac{1}{\cos^2 x} = \sec^2 x$$

## Mean value theorem

cont.  $[a, b]$

there exists  $c \in [a, b]$

$$f'(c) = \frac{f(b) - f(a)}{b - a}$$

## Integration

$\int dx$  " = " reversing  $\frac{d}{dx}$ .  
 limit of summation over small intervals.

$$\int \lim_{\Delta x_i \rightarrow 0} \sum_{i=0}^n f(x_i) \cdot \Delta x_i$$

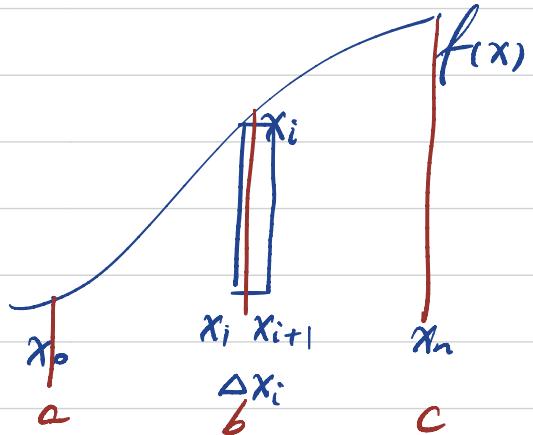

## Integration Laws.

$\downarrow \lim$

$$\int f+g \, dx = \int f \, dx + \int g \, dx$$

$$\int cf \, dx = c \int f \, dx$$

$$\int_a^b + \int_b^c = \int_a^c$$

## Fundamental theorem of calculus. (FTC)

1. Given  $F(x) = \int_a^x f(x) \, dx$

$f$  cont. over  $[a,b]$

$x \in [a,b]$

Then  $F' = f$

→ 2.  $\int_a^b f(x) \, dx = F(b) - F(a)$  if  $f$  cont. over  $[a,b]$   
 $F$  antiderivative of  $f$

! This allows us to compute integrals.

$$\int_0^1 x \, dx = \left. \frac{1}{2} x^2 \right|_0^1 = \frac{1}{2}(1)^2 - \frac{1}{2}(0)^2$$

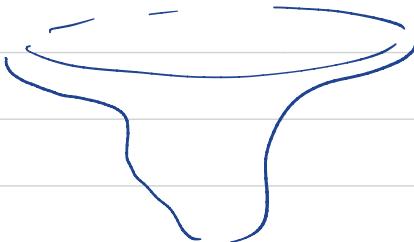

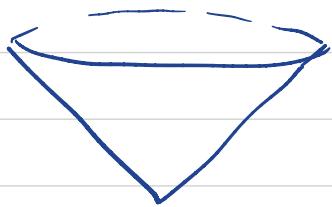

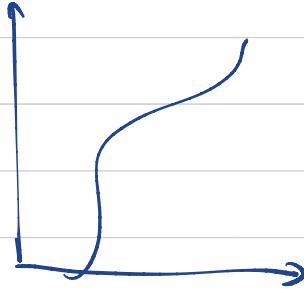

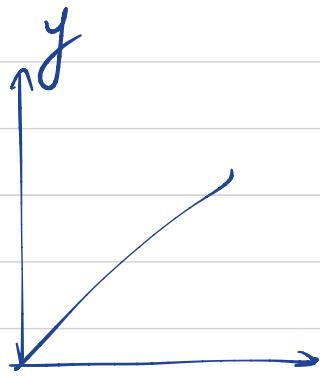

How to use Part 1 ?

Example  $\frac{d}{dx} \int_a^{\sin x} t^3 dt$

Take  $u(x) = \sin x$        $F(u) = \int_a^u t^3 dt$

$$\begin{aligned}\frac{d}{dx} F(u(x)) &= \frac{dF}{du} \cdot \frac{du}{dx} \\ &= u^3(x) \cdot \cos x \\ &= \sin^3 x \cdot \cos x\end{aligned}$$

Application: Computing area

## Review Calc I (Substitution rule)

$$\int f(u(x)) u'(x) dx = \int f(u) du.$$

Recall chain rule

$$(F \circ u)'(x) = F'(u(x)) \cdot u'(x)$$

Let  $f$  be the antiderivative of  $F$ .

$$\Rightarrow (F \circ u)'(x) = f(u(x)) \cdot u'(x)$$

Integrating w.r.t.  $x$ .

$$\underset{FTC}{\int_a^b} (F \circ u)'(x) dx = \int_a^b f(u(x)) \cdot u'(x) dx$$

$$= (F \circ u)(b) - (F \circ u)(a)$$

$$= F(u(b)) - F(u(a))$$

$$\underset{FTC}{=} \int_{u(a)}^{u(b)} f(u) du$$
