Fall 2019

Project: Simulating Multi-Soliton Solutions to NLS and KdV and Studying Interactions

• Our team focused on the nonlinear Schrödinger (NLS) equation with nonzero boundary condition and studied the exact solution of a one-soliton solutions. We compared the solution of those with zero boundary condition, and used Python to generate figures and animations for the solution.

- Duty $\,-\,$ Held weekly meetings and provided Python and LATEX supports to the team.
 - Supervised on the mid-semester presentation and the open house event
 - Helped the team to formulate final report.
